PROFESSIONAL SUMMARY

AI/ML Engineer focused on practical machine learning workflows in Python. I work with pandas, NumPy, scikit-learn and Jupyter Notebook to clean data, prepare features, train models and evaluate results. My work includes regression, classification, clustering, preprocessing pipelines, scalers, ColumnTransformer, model evaluation with accuracy, MSE, MAE and R2 score, and saving trained models with joblib.

AI/ML SKILLS

Languages	Python
Data	pandas, NumPy, data cleaning, missing values, type conversion, EDA
ML	scikit-learn, regression, classification, clustering, K-Means, Random Forest
Preprocess	OneHotEncoder, scalers, StandardScaler, MinMaxScaler, ColumnTransformer, pipelines
Metrics	accuracy, MSE, MAE, R2 score, confusion matrix
Deep Learning	PyTorch, tensors, neural networks, training loops
Tools	Jupyter Notebook, Git, GitHub, joblib, Matplotlib, Seaborn, VS Code

CORE WORKFLOW

- Load and inspect datasets in pandas.
- Clean numeric and categorical columns.
- Build preprocessing with scalers and ColumnTransformer.
- Train and evaluate models with clear metrics.
- Save trained models and pipelines with joblib.

PROFESSIONAL EXPERIENCE

AI/ML Intern

April 2026 - Present

IT Park - Tashkent, Uzbekistan

- Prepare datasets in Python: missing values, data types, categorical features, encoding and scaling.
- Build supervised ML notebooks with train/test split, preprocessing pipelines, model training and evaluation.
- Evaluate regression and classification models with MSE, MAE, R2 score, accuracy and confusion matrix.
- Keep project notebooks, code and experiment notes organized in GitHub.

Frontend Engineer

January 2026 - Present

Hiwelcome.uz - Tashkent, Uzbekistan

- Build web interfaces for API-based products and data display.
- Use Git/GitHub and component-based development in production projects.
- This software experience supports ML model integration with real web products.

Frontend Developer

February 2026

Delever.uz - Tashkent, Uzbekistan

- Developed responsive pages and reusable UI components.
- Improved page structure, consistency and API-based data rendering.

AI/ML PROJECTS

Yelp Restaurant Rating ML Pipeline

Python, pandas, scikit-learn, preprocessing, pipelines

- Built a reproducible preparation pipeline for restaurant rating data.
- Cleaned data, prepared features, applied encoding/scaling and organized the dataset for model training.

Flower ML Model

Python, Jupyter Notebook, scikit-learn, Random Forest

- Trained a RandomForestClassifier on the Iris dataset for flower class prediction.
- Used train/test split, accuracy evaluation and feature visualization.

Customer Churn Preprocessing

Python, pandas, scikit-learn preprocessing

- Converted TotalCharges to numeric values, handled missing values and encoded categorical columns.
- Practiced train/test preparation, scalers, pipelines and avoiding data leakage.

K-Means Clustering Practice

Python, scikit-learn, Matplotlib

- Used K-Means to group similar data points and visualized clusters with Matplotlib.

EDUCATION

World Bank & IT Park

Full Scholarship Program in AI & ML | 2026

- Python, data preparation, EDA, model training and evaluation.
- scikit-learn preprocessing, pipelines, metrics and visualization.
